

# 2.5 Solving Compound Inequalities

**Learning Target** Write and solve compound inequalities.

- Success Criteria**
- I can write word sentences as compound inequalities.
  - I can solve compound inequalities.
  - I can graph solutions of compound inequalities.

## EXPLORE IT! Describing Intervals on the Real Number Line

**Work with a partner.** In parts (a)–(h), use two inequalities to describe the interval. Explain your reasoning.

**Communicate Precisely**

Describe the difference between a closed interval and an open interval.

i. Do you use “and” or “or” when writing the inequalities for each graph?

## Writing and Graphing Compound Inequalities

### WORDS AND MATH

The word *compound* can have many meanings, such as a chemical mixture, a group of buildings, or a word made from more than one word. All of these meanings have something in common—they represent something that is made from more than one thing.

A **compound inequality** is an inequality formed by joining two inequalities with the word “and” or the word “or.”

The graph of a compound inequality with “and” is the *intersection* of the graphs of the inequalities. The graph shows numbers that are solutions of *both* inequalities.

The graph of a compound inequality with “or” is the *union* of the graphs of the inequalities. The graph shows numbers that are solutions of *either* inequality.

### Vocabulary

compound inequality, p. 102

### EXAMPLE 1 Writing and Graphing Compound Inequalities

Write each sentence as an inequality. Graph each inequality.

- A number  $x$  is greater than  $-8$  and less than or equal to  $4$ .
- A number  $y$  is at most  $0$  or at least  $\frac{3}{2}$ .

#### SOLUTION

- A number  $x$  is greater than  $-8$  and less than or equal to  $4$ .

$$x > -8 \quad \text{and} \quad x \leq 4$$

▶ An inequality is  $-8 < x \leq 4$ .

Graph the intersection of the graphs of  $x > -8$  and  $x \leq 4$ .

- A number  $y$  is at most  $0$  or at least  $\frac{3}{2}$ .

$$y \leq 0 \quad \text{or} \quad y \geq \frac{3}{2}$$

▶ An inequality is  $y \leq 0$  or  $y \geq \frac{3}{2}$ .

Graph the union of the graphs of  $y \leq 0$  and  $y \geq \frac{3}{2}$ .

## SELF-ASSESSMENT

- I do not understand.
- I can do it with help.
- I can do it on my own.
- I can teach someone else.

Write the sentence as an inequality. Graph the inequality.

- A number  $d$  is more than  $0$  and less than  $10$ .
- A number  $a$  is fewer than  $-6$  or no less than  $-3$ .
- WRITING** Compare the graph of  $-6 \leq x \leq -4$  with the graph of  $x \leq -6$  or  $x \geq -4$ .
- WHICH ONE DOESN'T BELONG?** Which compound inequality does *not* belong with the other three? Explain your reasoning.

$$a > 4 \text{ or } a < -3$$

$$a < -2 \text{ or } a > 8$$

$$a > 7 \text{ or } a < -5$$

$$a < 6 \text{ or } a > -9$$

## Solving Compound Inequalities

You can solve a compound inequality by solving two inequalities separately. When a compound inequality with “and” is written as a single inequality, you can solve the inequality by performing the same operation on each expression.

### EXAMPLE 2 Solving Compound Inequalities with “And”

Solve each inequality. Graph each solution.

a.  $-4 < x - 2 < 3$

b.  $-3 < -2x + 1 \leq 9$

#### SOLUTION

a. Separate the compound inequality into two inequalities, then solve.

$$-4 < x - 2 \quad \text{and} \quad x - 2 < 3 \quad \text{Write two inequalities.}$$

$$\underline{+2} \quad \underline{+2} \qquad \qquad \underline{+2} \quad \underline{+2} \quad \text{Addition Property of Inequality}$$

$$-2 < x \quad \text{and} \quad x < 5 \quad \text{Simplify.}$$

▶ The solution is  $-2 < x < 5$ .

b.  $-3 < -2x + 1 \leq 9$

$$\underline{-1} \quad \underline{-1} \quad \underline{-1}$$

$$-4 < -2x \leq 8$$

$$\underline{-4} \quad \underline{-2x} \quad \underline{\geq} \quad \underline{8}$$

$$\underline{-2} \quad \underline{-2} \quad \underline{-2}$$

$$2 > x \geq -4$$

▶ The solution is  $-4 \leq x < 2$ .

Write the inequality.

Subtraction Property of Inequality

Simplify.

Use the Division Property of Inequality.  
Reverse each inequality symbol.

Simplify.

### EXAMPLE 3 Solving a Compound Inequality with “Or”

Solve  $3y - 5 < -8$  or  $2y - 1 > 5$ . Graph the solution.

#### SOLUTION

$$3y - 5 < -8 \quad \text{or} \quad 2y - 1 > 5 \quad \text{Write the inequality.}$$

$$\underline{+5} \quad \underline{+5} \qquad \qquad \underline{+1} \quad \underline{+1} \quad \text{Addition Property of Inequality}$$

$$3y < -3 \qquad \qquad 2y > 6 \quad \text{Simplify.}$$

$$\underline{\frac{3y}{3}} < \underline{\frac{-3}{3}} \qquad \qquad \underline{\frac{2y}{2}} > \underline{\frac{6}{2}} \quad \text{Division Property of Inequality}$$

$$y < -1 \quad \text{or} \quad y > 3 \quad \text{Simplify.}$$

▶ The solution is  $y < -1$  or  $y > 3$ .

#### Look for Structure

In the inequality  $-4 < x - 2 < 3$ , what do you know about the quantity  $x - 2$ ? How does this help you begin to solve?

## SELF-ASSESSMENT

- 1 I do not understand.    2 I can do it with help.    3 I can do it on my own.    4 I can teach someone else.

Solve the inequality. Graph the solution.

5.  $5 \leq m + 4 < 10$

6.  $-3 < \frac{2}{3}k - 5 < 0$

7.  $4c + 3 \leq -5$  or  $c - 8 > -1$

8.  $2p + 1 < -4$  or  $3 - 8p \leq -1$

9. **OPEN-ENDED** Write a compound inequality that has a solution of all real numbers except  $x = 0$ .

Operating temperature:  
0°C to 35°C

## Solving Real-Life Problems

### EXAMPLE 4 Modeling Real Life

An electronic device may fail outside of its operating temperature range. Write an inequality that represents the possible operating temperatures (in degrees Fahrenheit) of the smartphone. Then describe a situation in which the phone may be outside of the operating range.

#### SOLUTION

- 1. Understand the Problem** You know the operating temperature range in degrees Celsius. You are asked to represent the range in degrees Fahrenheit and to describe a situation outside of this range.
- 2. Make a Plan** Write a compound inequality in degrees Celsius  $C$ . Use the formula  $C = \frac{5}{9}(F - 32)$  to rewrite the inequality in degrees Fahrenheit  $F$ . Then solve the inequality and describe a situation outside of this range.
- 3. Solve and Check**

$$\begin{array}{rcl}
 0 \leq C \leq 35 & & \text{Write the inequality using } C. \\
 0 \leq \frac{5}{9}(F - 32) \leq 35 & & \text{Substitute } \frac{5}{9}(F - 32) \text{ for } C. \\
 \frac{9}{5} \cdot 0 \leq \frac{9}{5} \cdot \frac{5}{9}(F - 32) \leq \frac{9}{5} \cdot 35 & & \text{Multiplication Property of Inequality} \\
 0 \leq F - 32 \leq 63 & & \text{Simplify.} \\
 \underline{+ 32} \quad \underline{+ 32} \quad \underline{+ 32} & & \text{Addition Property of Inequality} \\
 32 \leq F \leq 95 & & \text{Simplify.}
 \end{array}$$

▶ A solution is  $32 \leq F \leq 95$ . So, the operating temperature range of the smartphone is 32°F to 95°F. Someone might leave the phone in a car on a hot day, where temperatures can exceed 150°F.

#### Check

You can use the formula  $C = \frac{5}{9}(F - 32)$  to check that your answer is correct. Substitute 32 and 95 for  $F$  in the formula to verify that 0°C and 35°C are the minimum and maximum operating temperatures in degrees Celsius. ✓

## SELF-ASSESSMENT

- 1 I do not understand.   2 I can do it with help.   3 I can do it on my own.   4 I can teach someone else.

10. A pair of winter boots are rated for temperatures from  $-40^{\circ}\text{C}$  to  $15^{\circ}\text{C}$ . Write an inequality that represents the temperature rating (in degrees Fahrenheit) of the boots.
11. Birdwatchers record the types of birds they see or hear. The graph shows results from a location in Canada. Write an inequality that represents the range in the percents of birdwatchers who saw or heard a Black-and-white Warbler from July 1 to September 15.
